Treated pine wood

M10 bolts fixing

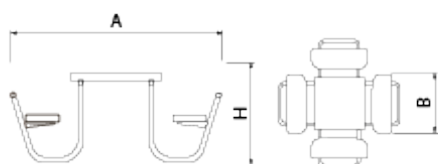

Low maintenance

CHESS Table, total dimensions (width x height) 1850x750 mm, made with pine wood planks (treated in a class 4 vacuum-pressure autoclave against woodworm, termites and insects) and phenolic board slatted with cross-grain. Tubular steel structure (treated with the Ferrus process, the triple-layer protector for iron, which guarantees optimal corrosion resistance). Anchored to a prepared surface (soft or hard ground), with expansion bolts according to the surface and project.

Steel with FERRUS treatment: an iron protection process that ensures optimal corrosion resistance. The Ferrus treatment consists of three layers applied after cleaning all dirt and impurities using shot blasting, and it involves an electrolytic bath followed by an epoxy primer and a final coating of polyester powder paint.

Pressure-treated pine wood, risk factor IV, ensuring its durability outdoors for a minimum period of 10 years. Under weather conditions, treated wood develops a warm honey-brown color that eventually turns into a natural silver-gray. If exposed to variable weather conditions, this type of pine wood may develop some surface cracks that do not diminish its durability in any way. Regarding resin and knots, it's important to note that these are part of its natural appearance.
