Low
maintenance

Kids picnic Table , overall dimensions (length x width x height) 1500x1080x570mm, made of Rebnew 100% recycled polymer. Prepared for anchoring with screws.

This compact children's picnic Table consists of a central tabletop and two side Benches integrated into a single structure. The set features a sturdy design with enclosed sides and wide supports, providing excellent stability and safety during use.

The design incorporates rounded, continuous shapes on the sides, reducing sharp edges and improving ergonomics for children. The Benches are positioned on both sides of the tabletop, allowing simultaneous use by several children in environments such as parks, school areas, or recreational zones.

The complex stands out for its robust and homogeneous appearance, with a construction system that minimizes maintenance and guarantees high resistance to intensive use and outdoor conditions.
