

VRV460
Fence
Rural

Treated pine
wood

Low
maintenance

Rural Fence composed of posts measuring 120 x 1500 mm and crossbars measuring 80 x 2000 mm. Made of pine wood (treated in a class 4 vacuum-pressure autoclave), resistant to termites and insects.
Recommended anchoring: By anchoring in concrete.

Pressure-treated pine wood, risk factor IV, ensuring its durability outdoors for a minimum period of 10 years. Under weather conditions, treated wood develops a warm honey-brown color that eventually turns into a natural silver-gray. If exposed to variable weather conditions, this type of pine wood may develop some surface cracks that do not diminish its durability in any way. Regarding resin and knots, it's important to note that these are part of its natural appearance.
